

CHICAGO® GRIP for SMALL COPPER

1613-35

Pulls
#6 and #8
Bare Copper
Wire

Finding the best grip to pull small copper can be challenging. Copper stretches over time becoming too thin for some grips which may cause slippage. Some smaller grips are harder to manipulate when wearing rubber gloves and are not hot latch compatible. Using a grip that's too big, too strong or too aggressive could damage the cable.

Klein now offers a solution that is big enough to work with gloves but small enough to pull #6 and #8 copper without damaging it. It's just right for the job.

**Hot Latch
version available**

1613-35H

- Pulls #6 and #8 bare copper wire without damaging or deforming the cable.
- Locking loop handles allow the jaws to be held in an open position for easy placement on wire or cable.
- Single "V" groove jaw contour.
