

ACL 750 Combo Tester

So simple, yet so sophisticated
Software provides documentation for ISO 9000

The ACL 750 Combo-Tester measures electrical resistance of wrist straps and heel grounders simultaneously and individually. The ACL 750 can do what pass/fail testers cannot: Give actual resistance readings and store data.

When the software is used, test results are stored on a computer which allows you to monitor and analyze test information and help manage your company's static control program.

Results from each test can be stored in a computer for up to one year. Creating reports will help guide your internal policies and improve your company's productivity. Reporting will direct your attention to problem work areas, employees who routinely fail, trends over time, and so much more.

Features:

- ✧ Tests both wrist straps and heel grounders simultaneously and individually at a safe 19 volts
- ✧ Accommodates both U.S. standard and dual wire (constant monitor) wrist straps
- ✧ Reads actual resistance of wrist straps and heel grounders from 500 kilohms up to 100 megohms, with an option up to 1000 megohms
- ✧ Alarm points may be programmed to any value for any employee or default limits (ESDA recommended limits) can automatically be used
- ✧ Allows employee access by keyboard, mouse, barcode, magnetic stripe or proximity card
- ✧ Allows for new employees to be added easily the first time they use the tester
- ✧ Made in the U.S.A.

Product #750 includes tester, footplate, stand, and NIST-traceable calibration certificate.

Product #750WS includes tester, footplate, and NIST-traceable calibration certificate.
