

Isolated simultaneous 8 channel Data logger

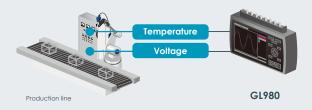

midi LOGGER GL980 NEW

- 8ch High speed simultaneous sampling
- Includes 500 V measurement with 16-bit A/D converter
- Equipped with true-rms measurement
- Large built-in RAM (4 M sampling/ch) and built-in Flash memory (4 GB)
- Large easy-to-read 7-inch LCD

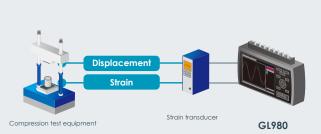

Grid-Hitel me loanis ti ann lo

Typical applications

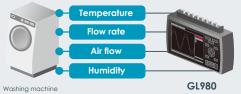

Measurement of control device

Measurement as an XY recorder

Measurement for testing washer and dryer

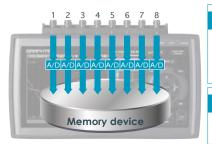

Measurement for brake components testing

High speed 1 MS/s simultaneous sampling with isolated input

GL980 is equipped with an isolated input mechanism to protect signals from interferences caused by noise from other channels. 16-bit A/D converter adopted to achieve hi-speed and hi-resolution measurement.

Simultaneous sampling Sampling interval: 1 µs to 1 min (in steps of 1, 2, 5)

GL980 utilizes simultaneous sampling to eliminate slowdown in sampling rate by using multiple A/D converters in simultaneous sampling method.

Eight individual A/D converters in each channel sustains the maximum sampling speed for all eight channels to measure high speed rapid voltage fluctuation and multi-channel vibration measurement.

External sampling function Maximum input frequency: 100 kHz

Sampling of the logger is performed in sync with an external device using an external signal input.

* B-513 Input/Output cable for GL is required.

Multifunction input

Voltage, temperature, humidity, logic and pulse measurements can all be taken simultaneously in high speed.

Pulse/Logic

Pulse: 4ch (Instant, Accumulating, RPM)

Logic: 4ch

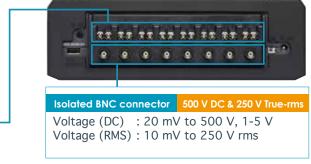

- * Select either Pulse or Logic
- * Required input/output cable for GL (B-513 option).

Screw terminal (size M3.5)

Thermocouple: K, J, E, T, R, S, B, N, W(WRe5-26)

Humidity : 0 to 100 %

* Required humidity sensor (B-530 option).

- * Connection can be made individually to BNC or screw terminal. BNC and screw terminal are connected to the same channel.
- Measure repetitive waveforms such as vibration with instantaneous value and effective value.

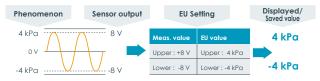

Measures either instantaneous value or effective value (RMS). By utilizing the trigger feature to measure abnormal spikes in the continuous waveform, users can measure vibration abnormalities repeatedly.

- Measures abnormalities in a repeated waveform by effectively measuring the corresponding RMS value.
 - All RMS measurement range with Crest Factor: up to 2

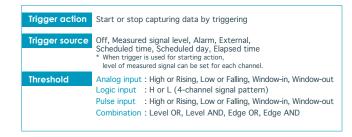

Scaling (Engineering unit) function

Measured voltage value can be converted to a specified engineering unit. The value can be displayed with the physical measurement value of the sensor and be saved into the data file with the converted values.

Trigger function

The trigger in this unit has multiple functions including level trigger of input signal value for each channel.

Instantaneous value meas. 500V 283V 0V -283V -500V OVrms RMS (effective value) meas. 250Vrms 200Vrms 0Vrms

Calculation function between channels

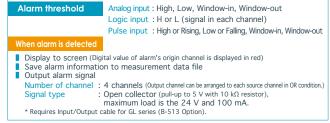

Four arithmetic operations (Addition, subtraction, multiplication and division) are available using two analog input channels.

* Data can be saved only in GBD file format.

Alarm function & signal output

Threshold of an alarm can be set for each channel. When an alarm occurs, notification is sent by following methods.

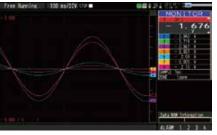

Large Easy-to-read 7-inch LCD

Monitor data in multiple methods in addition to digital value display and full waveform display screen.

Y-T waveform monitor screen

Displays data with analog waveform and digital value. Screen can also be split into 1, 2, 4 or 8 zones to display the channels in different zones.

Digital monitor screen

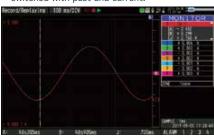

Displays current data in digital value and results of real time statistical calculation. (Function : Maximum, Minimum, Peak-to-peak, and Average)

When displays only current data, it can be shown in 1, 2, 4 or 8 zones.

Past waveform monitor screen

Display the past part of the data while capturing data. Execute without stopping measurement and also scroll past data. Data screen can be switched with past and current.

XY graph monitor screen

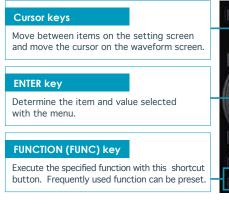

Emulates the classic XY chart recorder.
Also supports features for pen up/down and position movement.

Quick and Easy Set Up Process

Simple operation with cursor and enter keys, and menu-driven operation with six pre-set menu screens: AMP, DATA, DISP, TRIG, I/F (Interface) and OTHER.

Free-running function

The input signal being captured in real time can be monitored on the measurement or setting screen even if recording has not initiated. The measurement voltage range can be set while watching the waveform.

Other helpful functions

Delivers reliable measurements out at a location with unstable power supply.

Equipped with three types of options for power source, AC adapter, DC input, and battery pack. With a battery pack, GL980 runs continuously for approximately 2 hours. If an AC power failure occurs, it will automatically switch from the AC adapter to the battery pack. Additionally, when the voltage of the battery pack reaches low, measurement is automatically stopped after saving the data file preserving the accumulated data. (Requires two battery packs (B-569 option) installed.)

Instrument is in compliance with JIS Vibration Test Method for Automobile Type 1 Class A. (Vibration durability test: 5 m/s²)

Carrying case (B-581)

Portable case to store GL980 and signal input cables for easy handling.

coming soon

Cover (B-579)

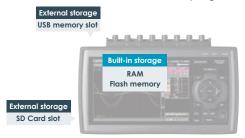

Protect the main body from cosmetic damages and minor impacts. GL980 is shipped with cover attached.

* The cover is not to protect from hard impact

Supports large built-in RAM (4MS/ch) and built-in Flash (4 GB)

Long term recording is made possible with 4 M samples/ch built-in RAM and 4 GB built-in Flash memory. It supports both USB Flash memory and SD Card memory to be used as external storage devices for recorded data for certain sampling intervals.

Approximate recording time

■ 8 channels of analog input. ■ Data is saved as a GBD file.

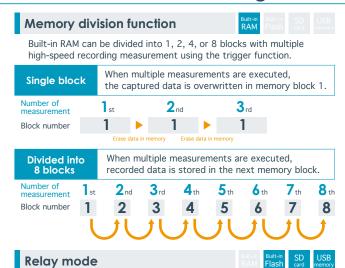

Memory type	Data capacity	1MS/s(1μs)	100kS/s(10μs)	1kS/s(1ms)	1S/s(1s)
Built-in RAM	4 M samples/ch	4 seconds	40 seconds	66 minutes	46 days
Built-in Flash memory	3.9 GB	N/A	N/A	2 days 6 hrs.	Over 1 year
External memory (SD/USB Flash memory)*	4 GB	N/A	N/A	2 days 11 hrs.	Over 1 year

■ 8 channels of analog input with 4 channels of Pulse input ■ Data is saved as a GRD file

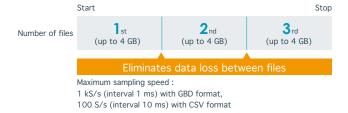

- 6 Charmers of analog input with 4 Charmers of Fulse input Data is saved as a GDD file.							
Memory type	Data capacity	1MS/s(1μs)	100kS/s(10μs)	1kS/s(1ms)	1S/s(1s)		
Built-in RAM	4 M samples/ch	4 seconds	40 seconds	66 minutes	46 days		
Built-in Flash memory	3.9 GB	N/A	N/A	1 days 4 hrs.	Over 1 year		
External memory (SD/USB Flash memory)*	4 GB	N/A	N/A	1 days 7 hrs.	Over 1 year		

^{*} When using 8 GB or larger memory, the size of data file will be up to 4 GB. The Relay mode enables extended recording time.

Convenient Data Recording Functions

Save data to multiple files with specified capturing time or file size (up to 4 GB) until recording data is stopped.

Data backup and hot swaps

The recorded data can automatically save to other storage device at specified regular intervals during data capture. (Maximum sampling speed: 1 kS/s (interval 1 ms) with GBD format, 100 S/s (interval 10 ms) with CSV format)

When the backup destination is set to a SD Flash memory card or a USB Flash memory device, memory device can be exchanged before the memory capacity becomes full using the key operation.

Auto save function

Recorded data saved in a built-in RAM is automatically copied as data file to a built-in Flash memory, SD Flash memory card or USB Flash memory with auto save function. An SD Flash memory card or a USB Flash memory can be used as a backup location when using the built-in RAM. The process will prevent losing any data captured in the built-in RAM by any overwrite or power cycles.

Ring mode

Saves most recent data of specified number after recording stops.

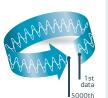

Number of capturing data 1000 to 10000000 data * When using built-in RAM, 10 to 4000000 data

Example:

Number of capturing data: set to 5000 points

Always save the recent 5000 data (The oldest data is overwritten by the new data.)

Maximum sampling speed:

1MS/s (interval 1 μs) in built-in RAM,

1kS/s (interval 1 ms) with GBD format in another device, 100S/s (interval 10 ms) with CSV format in another device

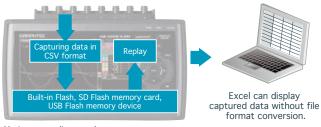

Save & replay data in CSV format

Captured data can be saved with GBD (binary) and CSV (text) format. CSV format file can be played on GL980 and opened with spreadsheet software.

Maximum sampling speed:

- 1 kS/s (interval 1 ms) with GBD format,
- 100 S/s (interval 10 ms) with CSV format

Search function

The search function can locate a specific value within the captured data as well as finding abnormal values within data of a long-recorded file.

Search for analog signal levels, logic signal pattern, pulse signal levels or alarm point in captured data.

Analog signal channel

Signal levels in each channel

Search mode: raising, falling, window-in, window-out

Logic signal channel

Signal level (H or L) in each channel

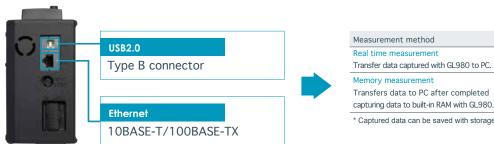

Pulse signal channel

Signal levels in each channel

Search mode: raising, falling, window-in, window-out

Alarm detected point on selected alarm signal output channel

Equipped with Ethernet (LAN) and USB interface to communicate with PC

^{*} Captured data can be saved with storage device on GL980 and PC simultaneously.

Data file format in PC Available sampling speed

1 ms to 1 min

1 μs to 1 min

Binary or CSV format

Binary format

Convenient function with LAN (Ethernet interface) capability

When GL980 is connected to LAN using the Ethernet interface, networked computer can monitor real-time measured value, transfer files, and change set ups without using application software (GL980_2000-APS software).

Web server function

GL980 can be controlled externally via a network on the WEB browser, which also supports real-time monitoring and ability to use the menu buttons.

FTP server function

File in available storage device on GL980 except built-in RAM can be transferred or deleted from the PC.

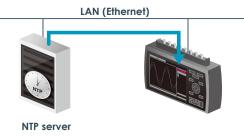

NTP client function

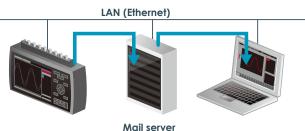

The clock on the GL980 is periodically synchronized with the NTP server.

Email sending function

Send information when alarm occurs, or when battery is low, or when communication speed drops, or to notify when the space becomes limited on the storage device by an e-mail to specified address. Information can also be sent periodically by settings.

USB Drive Mode to Easily Transfer Files to PC

USB drive mode

The USB drive mode function allows simple data transfer to the PC from built-in Flash memory and SD Flash memory card which acts as USB Flash drive on GL980. It also allows to add, remove, and delete files from storage device on GL980 from PC file browsing explorer.

* Built-in Flash and SD, except USB memory device

Start USB drive mode by turning the power on while pressing START/STOP key.

Move files by drag & drop feature in PC.

^{*} This interface is for connecting directly to PC only.

PC measurement with standard PC software included (GL980_2000-APS)

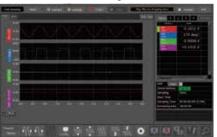

■ Multiple measurement screens including Y-T waveform, XY chart

Y-T display

Recorded signal is displayed in waveform (Y-T) and digital value for each channel.

Y-T display (Zone mode)

Screen is divided into multiple zone, and channels can be assigned to each zone.

XY display

Four groups of XY charts are displayed.

Easily Connect to the GL980 with Quick Set Up Conditions

GL980 is recognized automatically by clicking the connection button regardless of Ethernet or USB.

The settings are divided in to four screens with amp, recording, trigger and other.

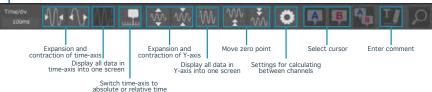

Includes free running feature similar to the main unit.

Measurement voltage ranges and other ranges can be set while reading an input signal prior to capturing the data.

When using Y-T display

GL980 supports DHCP

■ Convenient features from the GL980_2000-APS software

File combine and bind function

Superimpose

Data or file recorded on another unit or time can be imported as additional channels when using a SUPERIMPOSE function.

Link

Captured data in multiple files are connected and saved as new file. It is helpful in reviewing data captured with relay mode.

* Measurement parameters of each file must be the same.

Direct Excel function

The GL980_2000-APS software executes recorded data into a file on PC in real time and exports to a specified Excel file at the same time.

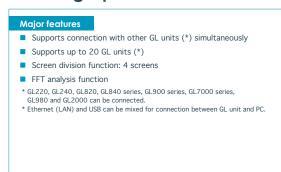

This is a valuable tool in creating report requiring post-process calculation with Excel software.

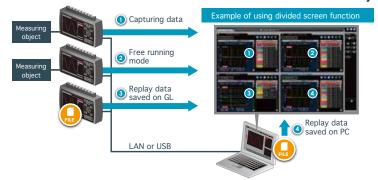

Printing function

The waveform of the playback data can be printed using a default printer. Printing range of the waveform can be set between cursors or all waveforms

Advanced software GL-Connection (version 2.0)

■ The high-performance software GL-Connection is included as an accessory

Output

signal

Alarm output

Trigger output

• Maximum input frequency: 100 kHz (Time error: 1 μs or less)

When a trigger is detected, output terminal releases approximately 500 µs width pulse (Low active)

Open collector (pull-up to 5 V with 10 kΩ resistor)

• Maximum load is the 24 V and 100 mA

Software spe	cifications			
Item		Description		
Model name		GL980_2000-APS		
Supported OS	S (*13)	Windows10, 8.1, 8, 7 (SP1 or later)		
Functions		Control GL980 and GL2000, Real-time data capture, Replay data,		
		and Data format conversion		
Supported de	vice	1 unit of GL980 or GL2000		
Settings cont	rol	Input condition, Capturing condition, Trigger/Alarm condition, other		
Transfer of	In memory capturing	Transfer the captured data to a PC sequentially while data is saved in built-in RAM on GL980		
captured data	with GL980	Sampling interval: 1 μs to 1 min		
	In real time capturing	Transfer the captured data to a PC while data is saved in built-in flash memory,		
		SD or USB on GL980		
		Sampling interval: 1 ms to 1 min saved in GBD and CSV format		
Displayed info	ormation	Analog waveform, Logic waveform, Pulse count waveform, Digital value		
Display mode		Waveform in Y-T with digital values, Enlarged waveforms,		
		Statistical calculation result values and history, XY graph		
File operation		Converting data format to CSV from GBD binary with data between cursors or all data		
Past data screen function		Displays the current data or past part of data by switching.		
		Available at sampling speed 1 kS/s to 1 S/m (1 ms to 1 min sampling interval)		
Statistical calculation		Maximum, Minimum, Average and Peak-to-peak (p-p) value during data capturing		

Item	Description
Capacity	7.2 V, 2900 mAh
Battery operating time	Approx. 2 hrs. in displayed signal (LCD: max. brightness)
	Approx. 2.5 hrs. in screen saver mode (no display)
	* When two battery packs are installed in GL980.
	Condition: 1 sample per second (1 s), saving captured data to built-in Flash
	use two fully charged battery packs, temperature is 25 °C
Method of charging	Charging on GL980
Charging time	Approx 10 hrs. (charging two batteries)
Other functions	If an AC power failure occurs, it will automatically switch
	from the AC adapter to the battery pack. (AC adapter priority use
	When the voltage of the battery pack reaches low, the measurement
	is automatically stopped after saving data file preserving the accumulated data

- (*1) It can set for each channel.
- File size of captured data is up to 4GB in each file
- Standard USB memory devices are required.
- Required minimum capturing time is 15 seconds in GDB format, 30 seconds with CSV format. When using built-in RAM, 10 to 4000000 data

- Connections can be made individually to BNC terminal or M3.5 screw terminal. Required Input/Output cable for GL series (B-513) option for connecting signal.
- Subject to the following conditions:
 Room temperature is 23 °C ± 5 °C

 - When 30 minutes or more have elapsed after power has turned on.
 Filter is set to Line (1.5 Hz) in DC measurement and temperature.
 - GND terminal is connected to ground.
 It is placed vertically.
- Average of the measured values is used.
 Wire size of Thermocouple used is 0.32mm diameter in the T and K type, and 0.65mm diameter in other types.

 (*10) Required Input/Output cable for GL series (B-513) option for connecting signal.
- (*11) Select either Logic input (4 channels) or Pulse input (4 channels), select either external Trigger input or Sampling input.
- (*12) Select either Trigger output (1 channel) or Alarm output (1 channel). Available 3 channels Alarm output always.
- (*13) Graphtec does not support software/driver used with operating systems that have become obsolete and are no longer supported by the OS developer.

In the Windows 7, edition of Ultimate, Enterprise, Professional and Home Premium are supported.

- AC adapter with power cable
- CD-ROM (PC application software, User manual)

• Ferrite core (attach to cable for radiation reduction)

- Tilt stand set (including mounting screws M4)
- Quick start guide and Safety guide
- Cover (attached to the main body)
- Screws (M3.5) for input terminal

Options and Accessories		
Item	Model No.	Description
Input/Output cable for GL	B-513	2 m long (no clip on end of cable)
DC drive cable	B-514	2 m long (no clip on end of cable)
Humidity sensor	B-530	With 3 m long signal cable (with power plug)
Shunt resistor	B-551	250 ohms (Converts signal from "4-20mA" to "1-5V" .)
Battery pack	B-569	Rechargeable Lithium-ion battery (7.2 V, 2900mAh)
Bracket for DIN rail	B-570	Bracket for DIN rail (GL980 main body), Build-to-order
Cover	B-579	Rubber protector (for replacement)
Carrying case	B-581	Comming soon
Input cable, Safe probe - BNC	RIC-141A	Insulated, 1:1 (42pf), 1.2 m long, 300 V DC, CAT II
Input cable, BNC - BNC	RIC-142	Insulated, 1.5 m long, 1000 V DC, CAT II
Input cable, Banana - BNC	RIC-143	Insulated, 1.6 m long, 600 V DC, CAT II
Clip, Alligator (small size)	RIC-144A	For RIC-143, Aperture 11 mm, 300 V DC, CAT II, Max. 15 A
Clip, Alligator (middle size)	RIC-145	For RIC-143/147, Aperture 20 mm, 1000 V DC, CAT II, Max. 32 A
Clip, Grabber	RIC-146	For RIC-143/147, Aperture 5 mm, 1000 V DC,CAT III, Max. 1 A
Input cable, Banana - BNC (Hi-voltage)	RIC-147	Insulated, 1.6 m long, 1000 V DC, CAT II
Input terminal adapter	SMA-102	Banana (receptacle) to BNC (plug), Insulated
AC Adapter	ACADP-20	Input: 100 - 240 V AC, Output: 24 V DC

- Due to the possibility of equipment or PC failure, the data files on the instrument are not guaranteed to hold memory. Please make a backup of data whenever possible to avoid data loss. Brand names and product names listed in this brochure are the trademarks or registered trademarks of their respective owners. Specifications and details are subject to change without notice. For additional information, please check our web site or contact your local representative.

Use equipment correctly and safely!

• To avoid malfunction or an electric shock by current leakage or voltage, please ensure ground connection and use according to the specifications
