

Adjustable Trip Point, High Voltage Output

Hx09 Series

SPECIFICATIONS

5 Year
Warranty

Sensor Power	Induced from monitored conductor
Insulation Class	600VAC RMS, UL, 300VAC CE
Frequency Range	50/60 Hz, On/Off status for Variable Frequency Drive (VFD) outputs at 12 to 115 Hz*
Temperature Range	-15° to 60°C (5° to 140°F)
Humidity Range	10-90% RH non-condensing
Hysteresis	10% (typical)
Terminal Block Wire Size	24-14 AWG (0.2 to 2.1 mm ²)
Terminal Block Torque	3.5 to 4.4 in-lbs (0.4 to 0.5 N-m)
Agency Approvals	UL 508 open device listing; CE: EN61010-1, CAT III, pollution degree 2, basic insulation

Do not use the LED status indicators as evidence of applied voltage.

If using this switch in an application that includes an electronically commutated motor (ECM), see Veris Application Note VN61, at www.veris.com.

* VFD systems generate fields that can disrupt electrical devices. Ensure that these fields are minimized and are not affecting the sensor.

DETECTS BELT LOSS/COUPLING SHEAR!

Now you can easily detect when drive belts slip, break, or pump couplings shear. In fact, a typical HVAC motor that loses its load has a reduction of current draw of up to 50%. That's why our sensors are the industry standard for status.

Detect Belt Loss, Coupling Shear, And Mechanical Failure

FEATURES

- The H809 has a low (0.75 A) minimum setpoint...avoids the need for multiple wraps of the conductor through the sensor even on loads as small as 1/5 HP
- H609 and H809 are small in size to fit easily inside small starter enclosures
- Removable mounting bracket optimizes field versatility
- Bracket on H909 can be installed in three different configurations...added flexibility
- Status LEDs for easy setup and local indication
- Adjustable trip point...precise current trip point setting
- Detect belt loss and mechanical failure...ideal for fan/pump status monitoring
- Easier to install than differential pressure switches...no tubing needed
- 100% solid state...no moving parts to fail
- 5-year warranty

DESCRIPTION

Hawkeye x09 Series are high performance current switches, ideal for line voltage loads. The devices are powered by the current being monitored. They are ideal for monitoring performance on unit vents, exhaust fans, recirculation pumps, and other fixed loads.

APPLICATIONS

- Detecting belt loss, coupling shear, mechanical failure, and inter-locking loads
- Verifying lighting circuit and other electrical service run times
- Monitoring status of industrial process equipment
- Monitoring status of critical motors (compressor, fuel, etc.)
- VFD output On/Off status
- Fan/pump status monitoring
