MSO2000X Series Mixed Signal Oscilloscope

V1.0

2024.05

Product Introduction

MSO2000X series mixed signal oscilloscope with the maximum bandwidth of 500 MHz, maximum sampling rate of 5 GSa/s and equipped with 4 analog channels and 16 digital channels, the memory depth up to 100 Mpts/CH. MSO2000X has unique Ultra Phosphor 3.0 technology, the waveform capture rate is up to 2,000,000 wfms/s, 256 grey temperature color, innovative digital trigger system with high trigger sensitivity and low jitter. This oscilloscope supports multiple advanced triggers, serial bus trigger and decoding, and supports the advanced sampling and analysis mode of spectrum analyzing, power analysis, histogram, waveform recording, enhanced resolution (ERES), hardware acceleration template testing, Search and Navigate. In addition, this oscilloscope has multiple measurements and mathematical operations. MSO2000X series adopts 10.1 - inch capacitive touch screen that supports multiple gestures for common waveform operations, and combined with multiple one-touch keys on the front panel, this greatly optimizes the efficiency of oscilloscope operation and improves the user experience.

Mainstream touchscreen design, intelligent interactive experience

Featuring a 10.1-inch HD capacitive multi-touch screen, it supports a variety of gesture operations, such as touch, drag, zoom and rectangle drawing, making operation more convenient and smooth, and helping the user can master the instru0ment more easily. It retains the traditional key and knob operation while supporting mouse and keyboard, making instrument operation more versatile and greatly improving the interactive experience.

Brand new appearance design

Innovative appearance of the instrument, double-sided thinning design; display and panel level, to enhance the touch operation and visibility range; display edge black frame margin + metal grey and black body, to enhance the overall sense of the instrument.

Features and advantage

- Analog channel bandwidth: 300 MHz/200 MHz/100 MHz
- Real-time sampling rate of the analog channel is up to 5 GSa/s. The maximum sampling rate of the digital channel is 1.25 GSa/s
- 4 analog channels, 16 digital channels, Maximum memory depth 100 Mpts
- The maximum waveform capture rate is 500,000 wfms/s (sequence mode: 2,000,000 wfms/s)
- 9 instrument functions: Digital Oscilloscope, Logic Analyzer, Function/Arbitrary Waveform Generator, Spectrum Analyzer, Digital Voltmeter, Frequency Counter, Protocol Analyzer, Bode Plot Analyzer and Power Analyzer
- Built-in 50 MHz equivalent performance dual channel function/arbitrary waveform generator, supporting load the oscilloscope on-screen data to Gen arbitrary waveform output in real time, and supporting multiple built-in arbitrary waveforms
- Bode plot loop test analysis to analyze the system stability
- Parameter measurement adds histogram and line graph display
- Up to 200,000 frames of uninterrupted hardware real-time waveform recording and analysis, with USB memory export support waveform recording and analyze
- Maximum 4 Mpts enhanced FFT, supporting the spectrum analyzer function of frequency setting, waterfall curve, detection setting and marker
- 54 kinds of parameter measurement
- Multi-channel 7-digit hardware frequency counter, supporting adjustable frequency refresh time and effective digit
- DVM: DC, ACRMS and DC+ACRMS
- Multiple trigger types: edge, pulse width, ramp, runt pulse, over-amplitude pulse, delay, timeout, duration, setup & hold, Nth edge and code pattern
- Protocol trigger and decoding function: RS232/UART, I2C, SPI, CAN, CAN-FD, LIN, FlexRay, AUDIO, SENT
- Zone triggering for capturing accidental signal and observing complicated signal
- Ultra Phosphor3.0 super phosphor display effect, up to 256 grey display
- 10.1 inch 1280x800 HD capacitive multi-touch screen, supporting gesture control: click, slide, zoom, edit and drag
- Multiple peripheral interfaces: USB Host, USB Device, LAN, EXT Trig, AUX Out (Trig Out, Pass/Fail, DVM), Gen Out, HDMI
- SCPI (Standard Command for Programmable Instrument)
- Built-in WebServer for accessing and controlling the instrument through browser, supporting
 PC/Mobil phone device for cross-platform access the instrument

Design Features

Cost-effective Nine-in-One integrated oscilloscope

MSO2000X series is integrated 9 instrument functions, which includes Digital Oscilloscope, Logic Analyzer, Function/Arbitrary Waveform Generator, Spectrum Analyzer, Digital Voltmeter, High-Precision Frequency Counter, Protocol Analyzer, Bode plot Analyzer and Power Analyzer. This is a cost-optimal oscilloscope for users.

Digital Oscilloscope

■ Bandwidth: 100 MHz/200 MHz/100 MHz

Maximum real-time sampling rate: 5GSa/s

Maximum memory depth: 100 Mpts

■ 4 analog channels, 1 external trigger channel

Logic Analyzer

■ 16-channel logic analyzer can be used with purchase of a UT-M15 logic analyzer probe (option)

■ Maximum sampling rate: 1.25 GSa/s

■ Maximum memory depth: 100 Mpts

Minimum detectable pulse width 800ps

Digital probe provides high 8-bit and low 8-bit signal input port, it simplifies the connection of DUT. When connecting to a square pins, UT-M15 can be connected directly to 8x2 square pins 2.54 mm

Logic analyzer probe UT-M15 has great electrical feature, the input impedance is 101 Ω ±1%, but the capacitive load is only 9.0 pF

Function/Arbitrary Waveform Generator (option)

■ 50 MHz equivalent performance dual channel output

■ Sampling rate: 250 MSa/s

■ Vertical resolution: 16-bit

 Built-in multiple standard waves: Sine, square, pulse, ramp, arbitrary, noise and DC

AM, FM, ASK, FSK and sweep output

Spectrum Analyzer

- Standard enhanced FFT, up to 4 Mpts,4 channels signal analysis
- Frequency range: 0 Hz~1 .25 GHz
- Waterfall curve
- 4 traces and 4 detections
- Mark type: Auto, manual and threshold
- Marker point list

Digital Voltmeter

- 4-digit voltmeter
- DC/ACRMS/AC+DCRMS
- Limit alarm

High-Precision Frequency Counter

- 7-digit hardware frequency counter
- Adjustable frequency counter refresh time and effective digit
- Summary counter

Bode Plot Analyzer

- Built-in function/arbitrary waveform generator
- Frequency response analysis
- Loop stability analysis
- Filter analysis
- Amplifier analysis

Protocol Analyzer

- 9 kinds of trigger protocol and decoding, which including the field of computer, embedded serial
- bus, automobile, aerospace and audio
- Decoding can be operated in the pause and record modes
- Event list and search function

Power Analyzer

With the development of chip technology, the power supply system requirements are also increased. When the power supply network of small voltage and high current has been the trend, especially for the chip or the power supply network composed of precision components, the requirements of the various parts of the circuit reliable power supply and noise suppression, but also to ensure that the integrity of the signal transfer between the chip, the power supply test has ushered in a greater challenge. The designer is more concerned about the energy-saving power supply and the response speed to ensure that the power supply is stable and clean.

Based on the currently tendency, the power integrity testing is particularly important, it directly affects the signal integrity, and in turn the signal quality also reflects the power quality, and even power quality will cause a series of electromagnetic interference problems, which makes the designer more headaches. So having an oscilloscope that can analyze the power supply is undoubtedly your most correct choice.

MSO2000X provides a full range of power analysis tools and evaluation results, you only need to select the appropriate analysis type, connecting the voltage probe and the current probe to the test point of power system or specified test fixtures as shown in the diagram, connecting to the channel that you want to observe, and then finally make appropriate fine-tuning to get the results you want.

Power quality

- Ripple wave analysis
- Harmonic analysis
- Loop analysis
- Safety operation area*

^{*} Power analysis support is subject to the latest firmware on the official website.

Ultra Phosphor 3.0

When you try to find and debug the occasional or intermittent anomalies in the signal, the waveform capture rate is a very important indicator. The capture rate of an oscilloscope is the ability to capture how many waveforms per unit of time, it reflects the oscilloscope speed of the process and analysis signal.

MSO2000X adopts advanced software and hardware architecture to achieve data processing that is $5\sim10$ times higher than the previous version. It is equipped with Ultra Phosphor 3.0, which supports 8-channel parallel graph mapping, the processing rate is up to 20 Gbps, the waveform capture rate is up to 500,000 wfms/s, and up to 2,000,000 wfms/s in the sequence mode. Compared with the traditional oscilloscope, the dead time of MSO2000X can be < 1μ s, that is, capture 1.17 ns fast edge signal of 2000,000 per second, so the accidental signal can be captured easily and correctly.

Multi-Windows

Multi-Windows can be freely dragged and extended.

Brand new quick Autoset strategy

Fuzzy control is an intelligent control method based on fuzzy set theory, fuzzy linguistic variables and fuzzy logic reasoning. The advantages of the algorithm are fewer iterations, faster speed, and better anti-interference ability.

In the past, the oscilloscope is performed Autoset to find the appropriate signal amplitude and frequency to display, but the response speed of oscilloscopes is very different due to different solutions adopted by each oscilloscope manufacturer, it affecting the experience of using oscilloscopes.

UNI-T redefines the execution of Autoset by adopting fast fuzzy algorithm based on analog signals and multi-channel parallel processing technology, combined with a 7 bits high-precision hardware frequency counter, which allows the oscilloscope to quickly find and process the amplitude and frequency of the unknown signals displayed when executing the Autoset strategy. It takes less than 1.5s to open the whole channel, and less than 1s to open a single channel, which greatly improves the working efficiency and reduces the risk of misuse for users who need to change test objects frequently and need to test quickly.

Multiple parameter measurements

The parameter measurement is a very important function for engineer when using an oscilloscope. MMSO2000X series provides 54 kinds of measurement parameters, and added 27 measurement parameter can be displayed at the same time. Each page of measurement statistics displays 9 measurement parameters, and it can be displayed in histogram and tendency chart. The histogram

can visually show the possibility distribution of the parameter. The tendency chart can reflect the parameter changing with time.

The parameter snapshot displays 39 kinds of test items for a single channel measurement. The parameter of parameter snapshot includes the measurement parameter of voltage and time in single channel, the measured result will be constantly refreshed during the process.

MSO2000X series adds a new strategy of amplitude calculation, top and bottom. It is convenient for the engineer to use the parameter measurement function. In addition, the added burst function of MSO2000X series can display the burst parameter, so that the channel measured data can be learned accurately and immediately.

Waveform math

MSO2000X provides a system of algorithms for complex waveform math that you can use to further process your waveforms and display the results directly on the oscilloscope.

- Basic operation: +, -, *, ÷
- Digital filter (high-pass, low-pass, band-pass and band-limit)
- Custom function operation: analog channel, reference waveform

Navigate and Search

The memory depth of MSO2000X series is upgraded to 100 Mpts, and the high memory depth can capture tens of thousands of waveforms in one capture. It takes a lot of time for engineers to search the waveform by themselves. The search condition can be customized, which is very useful for searching the sampled signal and finding the waveform of interest. With the analysis function, the event can be analyzed in detail, eliminating the time consuming and inconvenience of manual search.

Zone triggering

The function of the zone triggering is twofold, firstly, to isolate the occasional abnormal signal. Secondly, to stabilize the waveform display. Only a stable trigger can provide a stable waveform display. With this function, engineers can deal with complex and variable signals during debugging. The zone triggering function is easy to use, so engineers don't have to spend time learning how to use it, A rectangle drawing gesture can quickly separate a signal that to be observed. The waveform does not have to be completely stable to trigger when using the zone triggering function, the zone triggering function can capture a waveform that meets the condition and make it stable to trigger.

Various connection

MSO2000X series offers a wide range of connection with flexibility and convenience.

USB host ports on the front and rear panel that allow you to easily transfer screenshots, detailed instrument configuration information and waveform data to a storage device, and support USB, keyboard and mouse access for intuitive data entry and control.

USB device port on the rear-panel that allows you to remotely control the oscilloscope from a PC. The HDMI port allows the oscilloscope's high-resolution display to be projected in real time on other external monitors, ideal for teaching and teamwork.

WebServer

- SCPI for remote control
- Remotely check and control
- Export waveform file
- Browse user manual on-line
- PC/Mobil phone access

Performance Characteristics

All specifications are guaranteed, except those marked "typical".

Unless otherwise stated, all the Performance Characteristics are suitable for the probe that the attenuation switch set to 10x and MSO2000X series mixed signal oscilloscope.

To meet these specifications, the oscilloscope should first meet the following conditions.

- The instrument must be operated continuously for at least thirty minutes at the specified operating temperature.
- The self-calibration must be performed when the operating temperature reaches or exceeds 5 °C.

Model	MSO2304X	MSO2204X	MSO2104X		
Analog bandwidth	300 MHz	200 MHz	100 MHz		
Calculated rise time (10 to 90%) (typical)	≤1.17 ns	≤1.80 ns	≤3.50 ns

AM		
Carrier wave	Sine, Square, Ramp, Arbitrary wave	
Source	Internal	
Modulated wave	Sine, Square, Rising ramp, Falling ramp, Noise, Arbitrary wave	
Modulation frequency	2 mHz ~ 50 kHz	
Modulation depth	0% ~ 120%	
FM		
Carrier wave	Sine, Square, Ramp, Arbitrary wave	
Source	Internal	
Modulated wave	Sine, Square, Rising ramp, Falling ramp, Noise, Arbitrary wave	
Modulation frequency	2 mHz ~ 50 kHz	
Deviation	12.5 MHz (maximum)	
ASK		
Carrier wave	Sine, Square, Ramp, Arbitrary wave	
Modulated wave	Square wave (Duty ratio 50%)	
Modulation	2 mHz ~ 50 kHz	
frequency	Z III IZ * 50 KIZ	
FSK		
Carrier wave	Sine, Square, Ramp, Arbitrary wave	
Modulated wave	Square wave (Duty ratio 50%)	
Modulation frequency	2 mHz ~ 50 kHz	
Hopping frequency	Any frequency within the range of the Carrier wave signal	
Sweep		
Mode	Linear, Logarithmic and step	
Sweep time	1 ms~500 s	
Start and stop	Any frequency within the range of the waveform	
frequency	They requestey within the range of the waveform	
Display		
Screen	10.1 - inch multi-touch capacitive screen	
Resolution	1280×RGB×800 vertical pixel	

	-
Color	24-bit true colors
Persistence	Minimum, 50 ms, 100 ms, 200 ms, 500 ms, 1 s, 5 s, 10 s, 20 s, infinite, close
Display type	Point, Vector
Real-Time clock	Time and data (user-defined)
Waveform Intensity	1%~100% (default 50%)
Grid Intensity	0%~100% (default 50%)
Backlight Intensity	1%~100% (default 50%)
Transparent	0%~100% (default 50%)
Bode plot (option	on)
Start frequency	50 Hz ~ 50 MHz
Stop frequency	60 Hz ~ 50 MHz
Count	1~1000
Amplitude	High resistance: 20 mVpp~ 6 Vpp 50Ω: 10 mVpp~ 3 Vpp
DVM (typical)	
Source	Analog channel
Mode	DC, AC+DC RMS, AC RMS
Besolution	4-bit
Buzzer	Beeps when the specified limit values are reached or exceeded
Interface	
USB-Host 3.0	1 on the front panel, 2 on the rear panel
USB-Device 3.0	1 on the rear panel
LAN	LAN (VXI11), 10/100/1000 Base, RJ-45
AUX Out	Trig Out, Pass/Fail, DVM
Gen Out	2 on the front panel
10MHz reference	50 Ω , amplitude 400 mVpp ~ 4.5 Vpp (-3.979 dBm, 17.044 dBm) , frequency
input	10 MHz ± 10 ppm
10MHz reference output	50 Ω , 1.65 Vpp square wave
HDMI ¹	1 port for external display or projector

UT-P07A	– High resistance probe	10X: DC ~ 500 MHz Input resistance:10 MΩ Maximum of operating voltage: <600V pk Oscilloscope compatibility: all series of UNI-T

UT-P08A		10X: DC ~ 350 MHz
	High resistance probe	Input resistance: $10 \text{ M}\Omega$ Maximum of operating voltage: <600V pk Oscilloscope compatibility: all series of UNI-T
UT-P20	High resistance probe	DC ~ 100 MHz Probe coefficient 100:1 Maximum of operating voltage: 1500 Vrms Oscilloscope compatibility: all series of UNI-T
UT-V23	High voltage probe	DC ~ 100 MHz Probe coefficient 100:1 Input resistance: 100 MΩ±2% Maximum of operating voltage: 2000 Vpp Oscilloscope compatibility: all series of UNI-T
UT-P21	High voltage probe	DC ~ 50 MHz Probe coefficient 1000:1 Maximum of operating voltage: DC 15 kVrms, AC 10kV (sine wave) Oscilloscope compatibility: all series of UNI-T

Current probe

Model	Туре	
UT-P40	Current probe	DC ~ 100 kHz Range: 50 mV/A, 5 mV/A Current range: 0.4 A ~ 60 A Maximum of operating voltage: 600 Vrms Oscilloscope compatibility: all series of UNI-T
UT-P41	Current probe	DC ~ 100 kHz Range: 100 mV/A, 10 mV/A Current range: 0.4 A ~ 100 A Maximum of operating voltage: 600 Vrms Oscilloscope compatibility: all series of UNI-T

UT-P42		DC 150 H.L.
		DC ~ 150 kHz Range: 100 mV/A, 10 mV/A
	Current	Current range: 0.4 A ~ 200 A
	probe	Maximum of operating voltage: 600 Vrms
0		Oscilloscope compatibility: all series of UNI-T
9		
UT-P43	_	DC ~ 25 MHz
U LINET COMPANY COMPAN	Current	Range: 100 mV/A
	probe	Maximum test current: 20 A
	p. 0.00	Rising time: 14 ns
		Oscilloscope compatibility: all series of UNI-T
UT-P44	_	DC ~ 50 MHz
U LMI-T - STREET - STREET	Current	Range: 50 mV/A
	probe	Maximum test current: 40 A
	•	Rising time: 7 ns
		Oscilloscope compatibility: all series of UNI-T
UT-P4030D	_	Bandwidth: DC~100 MHz
	High-freque	Rising time: ≤3.5 ns
Ó	ncy current	Range selection: 30 A/5 A
0	probe	Maximum test current: 30A
		Voltage of insulated line300V CAT I
		Oscilloscope compatibility: all series of UNI-T
UT-P4150		Bandwidth: DC~12 MHz
	High-freque	Rising time: ≤29ns
600	ncy current	Range selection: 150 A/30 A
	probe	Maximum test current: 150A
		Voltage of insulated line600V CATII 300V
		CATIII
		Oscilloscope compatibility: all series of UNI-T
UT-P4500	_	Bandwidth: DC~5MHz
_		Rising time: ≤70 ns
6	High-freque	Range selection: 500 A/75 A
	ncy current	Maximum test current: 500 A
	probe	Voltage of insulated line: 600V CATII 300 V
		CATIII
		Oscilloscope compatibility: all series of UNI-T

UT-P4100A		Bandwidth: DC~ 600kHz
	_	Rising time: ≤583ns
1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	Low-frequen	Maximum test current: 100A
	cy current	Range selection: 100A/10A
Pillin.	probe	Range sensitivity: 0.01V/A
		Common-mode voltage RMS: CATI 600V
		CATII 600V CATIII 300V
		Oscilloscope compatibility: all series of UNI-T
UT-P4100B		Bandwidth: DC~ 2 MHz
	_	Rising time: ≤175 ns
	Low-frequen	Maximum test current: 100 A
	cy current	Range selection: 100 A/10 A
7	probe	Range sensitivity: 0.01 V/A
		Common-mode voltage RMS: CATI 600V
		CATII 600V CATIII 300V
		Oscilloscope compatibility: all series of UNI-T

Active probe

Model	Туре		
UT-P30	_		
The Big Hold	High voltage differential probe	DC ~ 100 MHz Attenuation ratio 100:1,10:1 Input differential-mode voltage: ±800Vpp Oscilloscope compatibility: all series of UNI-T	
UT-P31	_		
	High voltage differential probe	DC ~ 100MHz Attenuation ratio 1000:1,100:1 Input differential-mode voltage: ±1.5 kVpp Oscilloscope compatibility: all series of UNI-T	
UT-P32	-		
The state st	High voltage differential probe	DC ~ 50MHz Attenuation ratio 1000:1,100:1 Input differential-mode voltage: ±3 kVpp Oscilloscope compatibility: all series of UNI-T	

UT-P33		
To the way were	High voltage differential probe	DC ~ 120MHz Attenuation ratio 100:1,10:1 Input differential-mode voltage: ±14 kVpp Oscilloscope compatibility: all series of UNI-T
UT-P35		DC ~ 50MHz
	_	Attenuation ratio 500:1,50:1
		Rising time: 7ns
		Accuracy: 2%
On .	High voltage	Input differential-mode voltage:
	differential	1/50:130(DC+peakAC)
	probe	1/500:1300(DC+peakAC)
		Input common-mode voltage:
		100Vrms,CATI
		600Vrms,CATII
		Oscilloscope compatibility: all series of UNI-T
UT-P36	_	DC ~ 50MHz
		Attenuation ratio 2000:1,200:1
		Rising time: 3.5ns
		Accuracy: 2%
	High voltage	Input differential-mode voltage:
	differential	1/200:560 (DC+peakAC)
	probe	1/2000:5600 (DC+peakAC)
		Input common-mode voltage:
		2800Vrms,CATI
		1400Vrms,CATII
		Oscilloscope compatibility: all series of UNI-T

UsLimited Warranty and Liability

Uni-T guarantees that the product is free from any defect in material and workmanship within three years from the purchase date. This warranty does not apply to damages caused by accident, negligence, misuse, modification, contamination or improper handling. If you need warranty service within the warranty period, please contact your seller directly. Uni-T will not be responsible for any special, indirect, incidental or subsequent damage or loss caused by using this device.
